Tunga

A crowdfunding platform for fractional property ownership in Namibia, designed to operate inside the NAMFISA Regulatory Sandbox Crowdfunding Guidelines of 28 November 2025.

1 WHAT IT IS

Tunga lets a Namibian retail investor buy shares in one specific building — a separate company per property — from as little as N$5,000, receive the rent as dividends, and exit through an internal market or a sale of the asset after a 5–7 year hold. The prototype demonstrates the whole cycle end to end: Annexure 1 disclosure, subscription under the statutory caps, cooling-off, distribution, secondary transfer, and a regulator console reading live from the same data.

2 WHAT IT IS NOT

— **A fund.** No pooled vehicle, no blind pool, no discretion over investor money. One SPV per building, named on its own page.

— **A promise.** No return is stated as an expectation. Every figure is a scenario with its assumptions printed beside it.

— **A custodian.** Tunga has no payment path. A licensed bank holds a segregated trust account per round.

— **Licensed.** This is a prototype. It is not an offer of securities, and no money moves.

3 THREE RULES THAT SET THE ARCHITECTURE

GUIDELINE	CONSTRAINT	DESIGN CONSEQUENCE
s10(3)	N$10m per issuer, per 12 months	One SPV per building. No multi-asset fund, no aggregation across properties.
s28(1)(b), s43	Operator may not hold investor funds	Licensed bank custodian, segregated trust account per round. The platform never touches cash.
s28(1)(a),(c)	No advice, no promised returns	Disclosure of costs and scenarios only. Returns are never presented as expected outcomes.

4 WHAT THE PROTOTYPE ACTUALLY DOES

— **Investor.** Seven-tab Annexure 1 disclosure including a Costs & fees tab that itemises every charge, names its recipient, and works the total cost of a N$50,000 subscription. Subscription is hard-blocked at the s11 annual limit (for retail, the lesser of 10% of net worth or N$100,000), the offering minimum, and the remaining target. Four s35 risk acknowledgements must be accepted. 48-hour s22 cooling-off with a live countdown and a working cancellation.

— **Issuer.** Round stepper carrying every statutory step and its deadline; an Annexure 1 completeness checklist that gates publication; quarterly update composer that publishes straight to the offering page; obligations calendar including audited financials within 90 days.

— **Regulator.** 90-day s37 review clock per issuer; deadline board computed from live timestamps; investor concentration monitor against each category limit; filings log with overdue items flagged; s47 quarterly return export plus a CSV investor register.

— **Rulebook.** Fourteen guideline sections mapped to the exact line of software where each is enforced, so a reviewer can test the claim rather than accept it.

5 WHAT IT COSTS THE INVESTOR

On a N$50,000 subscription in the N$9.5m Khomasdal round, total fees over the term come to **N$16,781 — 33.6% of the money invested.** N$4,368 one-off, N$10,307 of management, N$2,105 on disposal, plus a 20% promote on profit above an 8% preferred return. Every line is itemised on the offering page, with the recipient named.

6 GAPS BEFORE A SINGLE REAL DOLLAR

- Server-side storage, authentication, role permissions
- KYC / AML with sanctions and PEP screening
- Custodian bank API and daily reconciliation
- Authoritative share registry and cap table
- Subscription agreements and e-signature
- Secondary trading facility (s30)
- Tamper-evident audit trail, 7-year retention
- Hosting, backups, monitoring, penetration test

7 IN PARALLEL, AND GATING EVERYTHING

— Sandbox admission
— Custodian agreement with a Bank of Namibia-licensed bank
— Fit-and-proper packs for directors and key persons
— Platform rules and a written s7(f) conflict-of-interest policy
